

Section 4.3 Linear Independence.

October 1, 2025

Linear independence is when two elements do not change in relation to the other. We can analyze this geometrically. Let's imagine we have:

$$\{u_1, u_2\} \in \mathbb{R}^2$$

Definition 0.1.

$$S = \{u_1, u_2, \dots, u_m\}$$

If $V_f = hV_f$, then these vectors are L.D. (Linearly dependent) to each other, otherwise they are L.I. (Linearly Independent)

Theorem 0.2. To decide vectors are LI, or LD.

$$S = \vec{V}_1, \vec{V}_2, \dots, \vec{V}_m \text{ in } \mathbf{R}^n, \text{ } C\text{-scalar.}$$

$$1. \text{ For } C_1V_1 + C_2V_2 + \dots + C_mV_m = 0.$$

$$\begin{array}{ll} \text{If } C_i \neq 0 & \rightarrow \text{L.D.} \\ \text{If } C_1 = C_2 = \dots = C_m = 0 & \rightarrow \text{L.I.} \end{array}$$

$$2. V_i = CV_j \quad \text{LD (definition)}$$

3.

$$\begin{array}{ll} \vec{0} \in S & \text{L.D.} \\ C\vec{0} = 0 \\ C \in \mathbf{R} \end{array}$$

$$4. S = \{\vec{V}\} \text{ and } \vec{V} \text{ is non zero. L.I.}$$

$$\begin{array}{l} C\vec{V} = 0 \\ C = 0 \text{ in } \vec{V} \neq 0 \text{ L.I.} \end{array}$$

5.

$$\begin{array}{ll} \text{If } m > n, & \text{L.D. e.g. } \{\vec{V}_1, \vec{V}_2, \vec{V}_3\} \quad \mathbf{R}^2 \\ \text{If } m < n, & \{\vec{V}_1, \vec{V}_2\} \quad \mathbf{R}^2 \text{ No conclusion, use other methods.} \\ \text{If } m = n, & \text{use determinant.} \end{array}$$

6. Wronskia's method.

$$w = \begin{matrix} & f, g \\ \begin{vmatrix} f & g \\ f' & g' \end{vmatrix} & = 0 & L.D \\ & \neq 0 & L.I \end{matrix}$$

Note: To span vectors in the same set, use LD vectors in the set. To span vectors in a space, use LI vectors in the set.

Examples

1 a)

$$\begin{aligned} u_1 &= (-1, 2, 4) \\ u_2 &= (5, -10, -20) \\ u_2 &= 5u_1, \quad \text{LD} \end{aligned}$$

2 b)

4 vectors for \mathbf{R}^3 LD

4 a)

Determine whether LD or LI in \mathbf{P}_2

$$\begin{aligned} 2 - x + 4x^2, \quad 3 + 6x + 2x^2, \quad 2 + 10x - 4x^2 \quad & \text{Use determinant} \\ \begin{vmatrix} c & x & x^2 \\ 2 & 3 & 2 \\ -1 & 6 & 10 \\ 4 & 2 & -4 \end{vmatrix} &= 39 \neq 0, \quad \text{LI} \end{aligned}$$

5 b)

$$\begin{bmatrix} 1 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix}, \quad \begin{bmatrix} 0 & 0 & 1 \\ 0 & 0 & 0 \end{bmatrix}, \quad \begin{bmatrix} 0 & 0 \\ 0 & 0 \\ 1 & 0 \end{bmatrix}, \quad M_{23}$$

$$\begin{aligned}
aV_1 + bV_2 + c &= 0 \\
a &= 0 \\
b &= 0 \\
c &= 0 \quad \text{LI}
\end{aligned}$$

20.

Use Wronskian to show that the functions $f_1(x) = e^x$, $f_2(x) = xe^x$, and $f_3(x) = x^2e^x$ are linearly dependent.

$$w = \begin{vmatrix} e^x & xe^x & x^2e^x \\ e^x & e^x + xe^x & 2xe^x + x^2e^x \\ e^x & 2e^x + xe^x & 2e^x + 4xe^x + x^2e^x \end{vmatrix}$$

26

$$\begin{aligned}
S &= \{v_1, v_2, v_3\} \in V && LD \\
v_4 &\in V, \text{ not in } S
\end{aligned}$$
